The Scanjet Bio 5SB is a new type of Rotary Spray Head (RSH) tank cleaning device. Compared with conventional static devices, the Bio 5SB is very efficient, saving water and chemicals while improving cleaning effectiveness. The Bio 5SB employs a unique fluid bearing rotary mechanism, with a service life two to three times that of traditional ball bearing rotary devices.

The choice of either a clip-on (pin), weld-on or threaded connection means the Bio 5SB is always easy to install, whether building a new CIP tank cleaning system or upgrading an existing one based on ordinary static or rotary spray devices.

With 360° impact coverage, self-cleaning and self-draining features, the Bio 5SB design follows EHEDG and GMP guidelines, and can be supplied with EN10204-2.1, 2.2 or 3.1 material and FDA 21CFR compliance certificates. The Bio 5SB-XXX-A clip-on and weld-on versions have attained 3A certification under sanitary standard 78-01. Surface finish roughness supplied as standard is Ra = 0.8 μm (30 μ inch); other surfaces are available upon request.

The Bio 5SB can be used in conjunction with the Scanjet WASHTRAC sensor to monitor and verify its operation and performance.

The Bio 5SB is the first choice for anyone looking for the most advanced Rotary Spray Head tank cleaning device available.

The Scanjet Bio 5SB Rotary Spray Head can be used in a wide range of applications, including:

+ Mixing vessels
+ Blending tanks
+ Beverage tanks
+ Dairy tanks
+ Yeast tanks
+ Reactors
+ IBCs

Specifications

Flow*  4.1-9.8 m³/h (18-43 USgpm)
Inlet pressure  1-5 bar (14-72 psi)
Max pressure  5 bar (72 psi)
Recommended pressure  3 bar (43 psi)
Max working temperature  95°C (200°F)
Max ambient temperature  150°C (300°F)
Weight  137-175 g (4.83-6.17 oz)
Connections  ¾” NPT or BSP
Weld connection
Pin connection
Material  EN1.4404/PEEK
Lubrication  Self lubricated by media
